Dart Programming - Lists (Basic Operations)

In this chapter, we will discuss how to carry out some basic operations on Lists, such as −

Sr.No	Basic Operation & Description
1	Inserting Elements into a List Mutable Lists can grow dynamically at runtime. The **List.add()** function appends the specified value to the end of the List and returns a modified List object.
2	Updating a list Lists in Dart can be updated by − • Updating The Index • Using the List.replaceRange() function
3	Removing List items The following functions supported by the List class in the dart:core library can be used to remove the item(s) in a List.
